

SMOKE ALARMS

What You Need to Know

A working smoke alarm can protect you against death or severe injury in the event a fire starts whether you are awake or asleep. When you go to sleep your sense of smell goes to sleep and unless the smoke is very acrid and irritates your nostrils, you may not wake up at all.

Protect Yourself: Smoke Alarm Installation

Since smoke and many deadly gases rise, installing your smoke alarms at the proper level will provide you with the earliest warning possible. Purchase your smoke alarm/emergency light before departure so you have it from the moment you move in.
